WORK EXPERIENCE

MAY 2026 - PRESENT

Voyagr

Full-Stack Web and Mobile Developer

At Voyagr, I take ownership of the full product development lifecycle – from architecture and frontend design to backend APIs and cloud deployment. I build cross-platform web and mobile applications using Next.js and React native on the frontend, paired with NestJS services on the backend. My work spans feature development, database design, third-party integrations, CI/CD pipelines, and product deployment, collaborating closely with product and design team to ship reliable, scalable solutions.

Jan 2024 - September 2024

InnoThink

Full-Stack Web and Mobile Developer

At InnoThink, my role revolves around contributing to the development of mobile applications and websites. I actively participate in full-stack development, covering frontend, backend and testing phases. This involves close collaboration with team members to deliver tailored solutions meeting clients' needs.
